

**The Texas Facilities Commission status report of the Electric Vehicle (EV) charging stations in Capitol Complex Employee parking garages. (August 2023)**

All existing EV charging stations are disabled and bagged at this time. These EV charging stations were procured for installation before the [National Fire Protection Association](#) and [Health Facilities Management](#) (trusted publication of the American Hospital Association) identified additional safety concerns. Charging stations will be relocated to surface parking lots to address safety considerations.

TFC will develop a plan and timeline to support EV charging stations on state property.

**Reminder:** The EV charging stations are “pay-per-use.” Fees are passed through a third-party vendor to the utility company. This program does not generate revenue for the Texas Facilities Commission or the State of Texas.
